## Ice Sliders Instructions Document

Game Link: [Ice Sliders](#)

Game Mechanics:

- Ice Sliders is a top-down puzzle game. It uses a grid-based movement system like in the older Pokemon games.
- The core mechanic in the game is also based on Pokemon, specifically the ice puzzles from Gold, Silver, and Crystal. When on the ice, if your character starts moving in a direction, they will keep moving in that direction until they collide with a rock or the edge of the map.
- There are three level difficulties, easy, medium, and hard, and there are 10 levels for each difficulty.

Controls:

- To move, use WASD. That's it! You can also press SPACE to restart the current level, or ESCAPE to return to the Main Menu. Simply get from the starting ladder to the one leading downward to progress to the next level.
- There is also a brief in-game tutorial if you need a reminder.
